Сводка

#LI-Hybrid

Location: Hyderabad, India

About The Role:
The Product Manager will drive the discovery, definition, delivery, and adoption of AI solutions built using Corporate Affairs (CA) data. The role will work closely with CA stakeholders to understand business pain points, identify opportunities where AI can add value, and translate those needs into clear requirements, personas, user journeys, user stories, and acceptance criteria for the technical team.

About the Role

Key Responsibilities:

- Engage Corporate Affairs stakeholders to understand pain points, business processes, and potential AI use cases.
- Translate business needs into well-defined product requirements, user stories, and acceptance criteria.
- Develop stakeholder personas and user journeys to ensure solutions address actual user needs.
- Work closely with AI Engineers, Data Engineers, Architecture, UX, and other technical teams throughout delivery.
- Perform functional/UAT testing after development to ensure requirements and acceptance criteria are met.
- Prepare and conduct stakeholder demos and maintain a structured feedback loop.
- Convert stakeholder feedback into prioritized enhancements and backlog items.
- Track functional gaps, bugs, and defects through resolution and validation.
- Drive adoption of AI solutions across relevant Corporate Affairs teams through demos, onboarding, engagement, and continuous feedback.
- Maintain and prioritize the product backlog based on business value, user impact, feasibility, and dependencies.

Essential Requirements:

- Full-time graduate degree in Engineering or a related discipline, with 8–12 years of relevant experience in product management within a consulting environment.
- Strong stakeholder management, communication, facilitation, and presentation skills.
- Product discovery, requirements gathering, backlog management, and prioritization.
- Strong ability to draft epics, features, user stories, and acceptance criteria.
- Experience developing personas, user journeys, and use cases.
- Strong understanding of SDLC, Agile, and Scrum methodologies.
- Experience with UAT, product demonstrations, feedback management, and defect/bug tracking.
- Good understanding of Generative AI concepts such as LLMs, RAG, Agentic AI, prompting, grounding, hallucination, and responsible AI. The person does not need to be an AI Engineer but should understand these concepts sufficiently to engage effectively with both stakeholders and technical teams.
- Must have a recognized AI, Generative AI, or cloud AI foundation/professional certification, or an equivalent professional credential demonstrating strong foundational knowledge of AI-enabled products.

Desirable Requirements:

- Business/domain knowledge of Corporate Affairs, healthcare, or the pharmaceutical industry, with the ability to understand stakeholder context, business processes, and industry-specific needs and translate them into relevant AI product opportunities and requirements.
- Product Management, Product Owner, CSPO, PSPO, Scrum, or Agile certifications would be good to have.
