Internal job title: Associate Director, Agentic AI Solutions Product Manager

About the Role:

We are seeking a Product Manager Agentic AI Solutions to lead the product strategy, development, and enterprise integration of a portfolio of Agentic AI solutions supporting our Research organization. This role sits at the intersection of product management, AI platform strategy, research informatics, enterprise architecture, and governance, with a strong focus on solutions built on Palantir Foundry and AIP.

The ideal candidate will shape and scale AI products that accelerate scientific workflows, enable trusted human-AI collaboration, and align with enterprise standards for agent interoperability, identity, security, and responsible AI adoption.

About the Role

Key Responsibilities:

- Lead **product management** for multiple Agentic AI solutions serving the Research organization, from strategy and roadmap through execution, adoption, and lifecycle management.
- Define product vision, value proposition, and success metrics for AI-enabled solutions that improve research productivity, decision support, and operational effectiveness.
- Partner with scientific, digital, data, engineering, platform, and business stakeholders to identify high-value use cases and translate them into scalable product capabilities.
- Own product planning and prioritization for solutions built on **Palantir Foundry and AIP**, ensuring alignment with research needs and enterprise architecture standards.
- Lead integration efforts between Research Agentic AI products and the **Enterprise Agentic Mesh**, enabling interoperability, orchestration, and scalable agent-to-agent collaboration.
- Develop the strategy for integrations with other enterprise agents and shared AI services, ensuring cohesive user experiences and reusable patterns across the organization.
- Define and drive the product strategy for **Agentic Identity and Security**, including trusted access models, authorization approaches, auditability, governance, and risk-aware deployment practices in partnership with security and platform teams.
- Establish frameworks for agent lifecycle management, product governance, release planning, and operational readiness.
- Work closely with engineering and architecture teams to define requirements for APIs, data products, orchestration patterns, observability, and system integration.
- Partner with legal, compliance, privacy, cyber, and risk stakeholders to support responsible and compliant deployment of Agentic AI capabilities; Act as a thought partner to senior leadership on the evolving role of Agentic AI in Research and the broader enterprise.
- Create business cases, product roadmaps, and executive communications that clearly articulate priorities, dependencies, risks, and expected outcomes.
- Monitor product performance, user adoption, and business impact, using insights and feedback loops to continuously improve products and platform strategy.
- Drive cross-functional operating models and ways of working across product, engineering, data, and research stakeholders in a complex enterprise environment.

Essential Requirements:

- Bachelor's degree required; advanced degree preferred in life sciences, computer science, engineering, data science, business, or a related field.
- 10+ years' experience in **product management**, with experience operating at a strategic level across complex, enterprise-scale technology products.
- Strong experience working with **AI, machine learning, generative AI, or agentic systems** in a product, platform, or transformation capacity.
- Experience with **Palantir Foundry and or AIP**.
- Strong understanding of enterprise product delivery, platform operating models, and integration strategy.
- Experience leading cross-functional initiatives involving business, technical, architectural, and governance stakeholders, with demonstrated ability to manage multiple products or workstreams simultaneously in a matrixed global organization.
- Familiarity with research and development environments in pharma, biotech, or life sciences.
- Strong communication, stakeholder management, and executive presentation skills.
- Proven ability to translate ambiguous business needs into clear product direction and actionable roadmaps.

Desirable requirements:

- Understanding of identity, access, security, and governance concepts for enterprise AI systems preferred.

Commitment to Diversity & Inclusion:

We are committed to building an outstanding, inclusive work environment and diverse teams representative of the patients and communities we serve.
